PROFESSIONAL SCRUM TRAINING OVERVIEW

An overview of Professional Scrum Training™ courses created by Ken Schwaber, Scrum.org, and the Professional Scrum Trainer Community

Scrum.org, the Home of Scrum, was founded by Scrum co-creator Ken Schwaber as a mission-based organization to help people and teams solve complex problems. We do this by enabling people to apply Professional Scrum through training courses, certifications and ongoing learning all based on a common competency model.

All of our courses provide a hands-on learning experience led by Professional Scrum Trainers (PSTs) who are experienced practitioners, vetted for their knowledge and teaching ability and go through additional training before they can teach each course. All courses are maintained by course Stewards who work with the 340+ PST community members to leverage their collective expertise. Each PST brings their own real-world experience into the classroom while using a consistent set of learning materials.

Scrum.org supports people wherever they are on their learning journey from beginner to highly experienced practitioner, helping them to grow over time with ongoing learning opportunities and resources. Community members share knowledge and gain new insights from each other leveraging forums, blogs and more.

Professional Scrum Courses

Applying Professional Scrum™

In this two day class* students learn to apply Professional Scrum. They experience new, agile ways of working that enable teams to deliver more value, satisfy stakeholders and work better together. Students work together as a team in a series of Sprints to solve complex problems, facing similar challenges that they face outside of class and learning how to use Scrum to address them. These Sprints enable students to see the practical application of Scrum and to understand the value of an Agile mindset.

Applying Professional Scrum™
for Software Development

Over the 3 days*, students gain a real-world view of what it is like to build software with Scrum. They collaborate over a series of Sprints applying modern engineering practices, and using the Scrum framework to manage complexity. The key focus of the class is on how to develop and deliver increments of releasable functionality. Students will experience real-world challenges and issues, and through a series of Sprints will learn how to continuously improve the way they perform their work.

Professional Scrum Master™

In this two day class* students are challenged to explore the Agile and Scrum principles so they can better understand what to do when applying Scrum to support their teams and organizations.

Students leave this course with an appreciation for Professional Scrum, the agile mindset and how to deal with common myths and impediments to agility. They gain the knowledge and understanding about how to choose and apply the appropriate practices and techniques that will be most beneficial for their Scrum Teams.

Professional Scrum Master II™

Unlike the Professional Scrum Master the Scrum Master, PSM II is an advanced course helping students to understand the stances that characterize an effective Scrum Master while diving deep into how they serve the Scrum Team and organization.

Over the 2 days*, students will learn about areas critical to growing as a successful Scrum Master such as how the principles and values of Scrum help guide Scrum Masters in the decisions they make and how the Scrum Master can help change the environment of Scrum Teams, creating an environment for agility to thrive. The Scrum Master role is complex and often, a Scrum Master must be able to apply different stances in order to be effective.
Professional Scrum Product Owner™

In this two day class* students will develop and solidify their knowledge of the Scrum framework and the accountabilities of being a Product Owner through instruction and team-based exercises. Students learn techniques that they can use to help them overcome the challenges that are often encountered on a day-to-day basis. They will do this while learning better ways to work with the organization, stakeholders, customers and their team to provide greater value in the product being delivered.

Professional Agile Leadership Essentials™

In this two day class* attendees develop a deep understanding of the role that leaders play in creating the conditions for a successful agile environment. Leaders and managers are critical enablers in helping their organizations be successful, yet the role of leaders and managers in an agile organization can be quite different from what they are used to. This course uses a combination of instruction and team-based exercises to help participants learn how to form and support agile teams to achieve better results, and how to lead the cultural and behavioral changes that organizations must make to reap the benefits of an agile product delivery.

Professional Scrum with Kanban™

There is a myth that teams need to choose between using Scrum or Kanban. There are many benefits to optimizing the flow of work in Scrum by leveraging Kanban practices. In this 2 day* training course, students will learn the benefits of using Scrum and Kanban together.

In this two day class* Students will learn how to optimize their workflow by Kanban practices to Scrum. By leveraging these practices, teams improve transparency, collaboration and self-management, ultimately improving their ability to achieve Sprint Goals at a sustainable pace.

Professional Scrum Product Owner™ - Advanced

The Product Owner role is multifaceted, requiring them to engage in behaviors and adopt mindsets beyond the core of Agility and the Scrum framework. In this two day class* students will gain a better understanding of what it means to deliver value and how to express that value inside and outside of their organization. Through a case study-based series of exercises, combined with instruction, students gain the entrepreneurial product leadership skills and practices critical to growing as a successful Product Owner.

Professional Agile Leadership Evidence Based Management™

EBM is an Agile approach to help leaders guide their teams toward continuously improving customer outcomes, organizational capabilities, and business results. EBM focuses on customer value and intentional experimentation to systematically improve an organization’s performance and achieve their strategic goals.

In this one day class* participants learn what EBM is and how to apply it through hands-on, activity-based learning.

Professional Scrum with UX™

In this two day class* students will leverage an ongoing case study as a way of applying techniques learned throughout the class and preparing to take what they learn back to their workplace to focus the team toward customer-centric design and discovery.

Scrum.org and its Professional Scrum Trainers created this course with the authors of the book Lean UX, Jeff Gothelf and Josh Seiden.

Scaled Professional Scrum™

The Scaled Professional Scrum (SPS) with Nexus course is designed as an activity-based workshop where students develop a collection of skills that can be applied to overcome challenges when scaling Scrum. In this two day class*, students work together in a Nexus to organize and simulate a scaled product development project. Throughout this case study-based class, common challenges in scaling are presented and more than fifty practices for overcoming them are revealed.

Certification & Assessments

Each class includes a free attempt at the corresponding level certification assessment. In your Professional Scrum class, you will learn the importance of inspection, adaptation, and fast feedback cycles. To reinforce those concepts, if you take a Scrum.org class and attempt the certification assessment within 14 days and do not score at least 85%, you will be granted a 2nd attempt at no additional cost.

* When offered in-person, this course is generally delivered over two consecutive days. When offered as a Live Virtual Class, the course may be broken up into more, shorter days.
